

Resilite® Wrestling Mats with Exclusive Microban® Antimicrobial Product Protection

- Only Resilite® Wrestling Mats are available with built-in Microban® antimicrobial product protection.
- Microban® antimicrobial protection is infused into both sides of the mat during the manufacturing process to provide continuous antimicrobial protection against bacteria, mold and mildew that can cause stains, odors and deterioration of the mat.
- On an untreated surface, microbes can double in number every 20 minutes. In a 24 hour laboratory test, the samples to the right were both inoculated with bacteria and then photographed after 24 hours. The top sample was manufactured with built-in Microban technology and the bottom sample was untreated.*
- Microban protection works 24/7 and won't wash off or wear away for protection that lasts the lifetime of the mat.
- Microban technology is not a substitute for normal cleaning, Microban technology keeps mats cleaner between regular cleanings.
- Microban technology is approved by the EPA for use in wrestling mats and has a long history of safe and effective use.
- The use of the Microban Antimicrobial is compliant with the US EPA Treated Articles Exemption (PR Notice 2000-1) and 40 CFR 152.25(a).

*This information is based upon standard laboratory tests and is provided for comparative purposes to substantiate antimicrobial activity for non-public health applications. Microban technology is not designed to protect users from disease causing microorganisms. Microban protection inhibits the growth of microorganisms that cause stains, odors, and product degradation. Antimicrobial action limited to product surface.

Untreated

Microban® Antimicrobial Protection versus Disinfectants

Disinfectants

Disinfectants can be sprayed or wiped on a surface and can kill 99% of bacteria on the surface of a product in less than 10 minutes. However, disinfectants quickly dissipate off the surface and provide limited on-going protection against microbes.

Built-in Antimicrobials

Unlike disinfectants, built-in antimicrobials do not provide an instant reduction in bacteria, but instead work continuously to inhibit the growth of microbes that can cause stains, odors and product deterioration. Microban antimicrobial technology is a good adjunct to disinfectants because it provides 24/7 protection that can keep the mat cleaner between regular cleanings. On an unprotected surface, microbes can double in number every 20 minutes.
